READ BEFORE ORDERING

Prices of Iris Tubers include delivery.

On all varieties costing \$1.00 or under, 6 of one variety can be supplied at five times the price of one.

Terms: Cash with order or before delivery. It is advisable to send orders as early as possible, as stock of some of the rarer varieties is limited. Remittances will be returned if stock is exhausted. Every care is taken to send well-grown tubers, and these vary in size according to the varieties. Stock is guaranteed to be **True to Name**. Should any prove otherwise, replacement will be made upon proper proof.

Culture: Sun and good drainage are essential to all Bearded Iris. Plant tubers on the very surface of the ground. Have the soil well pulverized and in good condition. Top dress annually with lime and bone meal. Lift and divide in late summer, or after flowering every three or four years. Cover with straw the following winter to prevent heaving from frost. After they are established, they need no covering in winter.

Some of the best qualified members of the American Iris Society checked on many of the Bearded Iris in the late spring of 1922, and this checking has been indicated by numbers—100 being a perfect Iris, 90 and over very fine, 85 fine, 80 very good, 70 good. These have been placed after the Iris as a guide. While these decisions are not conclusive and are subject to change, yet in general they represent the opinion of some of the recognized Iris authorities.

The following varieties, while not embracing all of our collection, represent those of which we have enough to list this year. A few Iris can only be delivered in July or later, and are so indicated.

Some Bearded Iris Seed will be available in August. Seed saved from fine varieties only; packet 50 seeds for 50 cents. Seed from extra fine varieties or shy seeders, packet 25 seeds for \$1.00

- LATE-FLOWERING BEARDED IRIS**
- AFTERGLOW** (Sturt. 1918) 86—Pallida form of soft grey lavender shading to buff, with rich yellow at the haft; strong grower; 3 feet\$1.50
